

# Model 590 Control Valves

## Technical Sales Bulletin

**Figure 1** Dyna-Flo Model 590 6 inch Rotary Control Valve with Size 112 DFRP Actuator

The Model 590 series rotary ball style control valve is used in all kinds of demanding applications, in oil and gas production and chemical process industries. It is also suited to high flow, low pressure drop services. The 590 series is used in both throttling and on/off control of liquids or gases.

The straight through unrestricted flow path provides higher capacity than globe style valves. A splined shaft provides accurate control in throttling operations and flexibility in actuation options. The 590 series, when combined with a Model DFRP piston actuator, is a rugged control valve assembly, to which a wide variety of positioners and accessories can be mounted.

The Model 590 control valve is manufactured to a high level of quality specifications to ensure superior performance and customer satisfaction.

### Features

#### Higher Flow Capacity

The straight through flow path allows increased capacity and minimum pressure drop compared to conventional globe style valves.

#### Full ASME Class Shutoff Capabilities

In most applications the Model 590 is capable of full static differential pressure shutoff.

#### Simplified Maintenance

Precise machined tolerances allow for easy replacement of the ball seal. Shaft seals can be easily replaced without the removal of the shafts.

#### Positive Ball to Shaft Connection

A tapered tri-lobe polygon facilitates a positive connection at the ball for more precise and reliable control.

#### High Cycle Life

High cycle PTFE lined bearings allow for minimum wear in control applications. The balanced shaft design reduces wear caused by end thrust especially with higher pressures.

#### Tight Shutoff

Standard shutoff capabilities are 0.0001 percent of maximum rated capacity.

#### Precise Flow Control

The Model 590 offers a good balance of high flow capacity and control.

#### NACE Compliant

NACE MR0175 standard construction.

#### Live Loaded Packing Standard

Live loaded packing is now our standard offering.

# Model 590 Control Valves

## Technical Sales Bulletin

### SPECIFICATIONS

#### Available Valve Configurations

The 4", 6", 8", 10", 12", and 16" flangeless valves will mate ASME Class 600 and 900. Refer to Table 1.

Rotary ball valve assembly available with:

- Single Ball Seal
- Dual Ball Seal
- Flow Ring

#### Maximum Inlet Pressure

4 through 12 inch valve body consistent with Class 600 and 900 ASME B16.34.

16 inch valve body consistent with Class 600 ASME B16.34.

#### Maximum Allowable Shutoff Pressure Drop

**Single Seal and Dual Seal:** Refer to Figure 10.

**Flow Ring:** Limited by the pressure/temperature rating of the valve body.

#### Material Temperature Capabilities

##### Single Seal and Dual Seal:

- 50°F to 180°F (-46°C to 82°C) LCC Body.
- 20°F to 180°F (-29°C to 82°C) WCC\* Body.
- 50°F to 180°F (-46°C to 82°C) CF8M Body.

##### Flow Ring with Fluorocarbon O-Rings:

- 50°F to 400°F (-46°C to 204°C) LCC Body.
- 20°F to 400°F (-29°C to 204°C) WCC\* Body.
- 50°F to 400°F (-46°C to 204°C) CF8M Body.

**\*Note:** WCC body material is special order.

#### Construction Materials

Refer to Table 8 for construction materials. Contact your Dyna-Flo sales office for more information and other options.

#### Flow Direction (Refer to Figures 3, 4, 8, & 9)

**Single Seal Configuration:** Forward flow only.

**Dual Seal Configuration:** Required for bidirectional flow shutoff.

**Flow Ring Configuration:** Forward or reverse flow.

#### Actuator Mounting

Right-hand, or Left-hand (as viewed from seal end of valve). In one of 4 positions (12 (Std.), 3, 6, and 9 o'clock) with respect to the valve body in a horizontal pipe.

#### Maximum Ball Rotation

90 degrees.

#### Shutoff Classification

**Single Seal and Dual Seal:** 0.0001% of maximum valve capacity (less than 1% of Class IV, ANSI/FCI 70-2 and IEC 60534-4).

**Flow Ring:** 1% of maximum valve capacity

#### Flow Characteristic

Modified Equal Percentage

#### Valve Dimensions

Refer to Figure 2 for valve diagram.

Refer to Tables 3 to 7 for valve dimensions.

Refer to Tables 3 & 5 for shaft & bore diameters.

#### Approximate Valve Weight

Refer to Table 2.

#### Valve Sizing Coefficients

Refer to Table 9.

For more information and other options contact your Dyna-Flo sales office.
